Eisenhower Matrix: Streak with Stakes by Dhruv

	Urgent	Not Urgent
Important	**Do - (Your MVP)** • Set a weekly study commitment • Check in for today and block duplicates • Save and load data from CSV files • Count misses and show the current streak • Show the week's status, limit warning, and broken commitment message	**Schedule - (For V2.0+)** • Track multiple habits • Send a daily reminder to study • Keep history across weeks • Show monthly stats and longest streak
Not Important	**Delegate - (Use a library)** • Date math with java.time • File reading and writing with java.nio.file • Automated testing with JUnit	**Delete - (Cut it)** • User accounts • Mobile app • Social leaderboard • Real money penalties

Tech Stack

- Language: Java, which I already know from class and can explain line by line
- Built in libraries: java.time for date calculations and java.nio.file for reading and writing files
- External library: JUnit for testing streak and miss count edge cases
- Data storage: commitment.csv for the weekly rule and checkins.csv for one date per check in
- Data source: None, because the user enters all the data from the terminal
- Tools: Git and GitHub for version control, plus an IDE or terminal for compiling and running
